Summary

Senior Software Engineer with **5+ years** of experience designing backend infrastructure and AI-integrated systems using Python, FastAPI, and ReactJS/NextJS. Strong background in microservices, RAG pipelines, Agentic AI and MCP, with a track record of building scalable, production-grade solutions. AWS Certified Solutions Architect

Skills

- **Languages** Python, SQL, JavaScript/TypeScript, Shell
- **Backend** FastAPI, Flask, Celery, AsyncIO, Redis, REST API Design, PyTest
- **GenAI & LLMs** RAG Pipelines & Evaluation Frameworks, LangChain, Fine-tuning, Prompt Engineering
- **Agentic AI** LangGraph, CrewAI, OpenAI Agents SDK, MCP, Multi-Agent Orchestration, Agent Guardrails
- **Data & Search** PostgreSQL, MySQL, Vector Databases (FAISS, ChromaDB), Vector Embeddings, Semantic Search
- **Cloud & DevOps** AWS (ECS, S3, IAM), Docker, GitHub Actions, Linux
- **Frontend** ReactJS, NextJS, Tailwind CSS, SSE Streaming

Experience

- **Hitachi Digital** Bangalore, India
  Senior Software Engineer Jul 2026 - Present
  - Built and exposed a FastAPI-based **tool interface** via **OpenAPI schemas**, enabling AI agents to invoke Python-backed real estate strategy calculations pulling in data from **5 data sources**.
  - Engineered an **integration layer** exposing **10+** property filter parameters as AI-callable tools with defined input schemas, **converting natural language queries** into structured filter updates reflected live on the map.
- **Samsung Research Institute** Noida, India
  Software Engineer 2 Feb 2026 - Jul 2026
  - Delivered **5x throughput** improvement and **zero job loss** by building a fault-tolerant Python job queue using Celery and Redis with availability-based scheduling.
  - Engineered a RAG pipeline using FastAPI and FAISS with a ReactJS frontend for real-time streaming responses, reducing Tizen Support platform search latency by **50%**.

  Software Engineer Jun 2022 - Jan 2026
  - Led 8-week onsite backend migration at **Samsung HQ**, South Korea, re-architecting REST APIs to support 10+ **first-ever** Tizen OS upgrade test cases with zero compatibility issues.
  - Built a GitHub Actions CI/CD pipeline, replacing manual deployments and reducing **release times by 60%**.
  - Drove **40% reduction** in operational overhead by building a fullstack internal tool — Flask APIs, PostgreSQL backend, and a ReactJS dashboard — centralizing version control for thousands of Tizen Store applications.
  - **2x Samsung Spot Award** recipient for delivering high-impact backend systems and platform improvements.
- **Standard Chartered Bank** Bangalore, India
  Developer Aug 2021 - May 2022
  - Built a Python and Flask REST API layer to abstract blockchain transactions, reducing **integration time by 80%.**
  - Cut blockchain infrastructure **setup time by 90%** by automating network provisioning with Python scripts.

Education

- **Bachelor of Technology - VIT, Vellore** Jul 2017 - Jun 2021
  Electronics and Communication Engineering - Publication CGPA: 8.96/10.0

Projects

- Semantic Cache – Built a semantic caching library for LLM calls using **vector similarity search**. Decorator-based interface with sync and async support. Supports **pluggable embedders** (OpenAI, Hugging Face Transformers, SentenceTransformers) and backends (Redis, FAISS, ChromaDB) with configurable similarity thresholds and TTL. GitHub Demo
